

Farhad Masjedi Zadeh

Senior Backend Developer | System Design & Technical Leadership

 f.masjedizadeh@gmail.com

 (Open to Remote)

DoB: 1994-01-18

Profile Summary

Senior Backend Developer with over a decade of experience in Laravel-based backend development and scalable system design. Specialized in building and optimizing high-load, enterprise-level platforms for B2B and B2G environments. Strong expertise in microservices, data-intensive systems, and production-grade infrastructure, complemented by hands-on experience in technical leadership roles.

Work Experience

January 2025 - Present

Backend Developer

Shabake Sazan Tosan

Tasks and Achievements

- Developing a comprehensive CRM and Hosting Management System, tailored for automating hosting operations.
- Architected a scalable Marketplace feature, enabling third-party developers to create and integrate custom modules/plugins.
- Implemented a robust and unified layered architecture leveraging Laravel's advanced features, including Service Layers, Repository Pattern, Form Requests, and DTOs to ensure modularity and clean code.
- Engineered advanced Queue management and Job Scheduling mechanisms to handle heavy background processes efficiently.
- Integrated WebSockets to facilitate real-time communication and instant user updates.
- Collaborating within an Agile team using Trello for task management and progress tracking.

September 2024 -

November 2025

Chief Technology Officer (CTO)

Dadeh Rasam Niroo Kavosh

Tasks and Achievements

- Led and managed the technical development team, including coordinating tasks, mentoring members, and conducting weekly onboarding/sync meetings remotely.
- Supervised the development of the "Dornica" system, overseeing technical design, implementation, and resolving complex technical challenges.
- Managed infrastructure and servers in a DevOps role, ensuring system stability and performance.
- Utilized project management and knowledge-base tools such as Microsoft Azure and Notion to streamline workflows.
- Participated in organizational meetings and contributed to the sales process for government and enterprise clients (B2G/B2B).

August 2022 - March

2025

Scrum Master & Backend Developer

Ati Dadeh Nahad Parseh

Tasks and Achievements

Technical & Management Experience:

- Refactored and optimized existing systems ("Ecomelk"), significantly improving overall performance.
- Developed a smart user wallet system based on Microservices architecture.
- Managed servers and oversaw DevOps processes to ensure system reliability.
- Utilized project management tools such as ClickUp and Microsoft Project (MSP).
- Worked with version control and DevOps tools like GitLab.
- Leveraged knowledge management platforms such as Atlassian Confluence.

Startup Activities:

- Actively participated in specialized real estate industry exhibitions and events.
- Contributed to weekly think-tank sessions and implemented strategic pivots.
- Collaborated in negotiation meetings with investors and presented technical product demonstrations.

July 2022 - September

2024

Full Stack Developer

Karnika Andish Pars

Tasks and Achievements

- Led the complete rewrite of the new version of the Karnika web-based system.
- Integrated enterprise web services and government identity authentication systems.
- Managed and processed large-scale streaming datasets (multi-gigabyte scale).
- Optimized system performance to ensure stability and efficiency under high-load conditions.

January 2019 - April 2022	Chief Technology Officer (CTO)	Mana Fanavari Avan Gostaresh			
<hr/>					
Tasks and Achievements					
1. Developed the "GPS Line" knowledge-based fleet management system (Full Stack: Back-end & Front-end). 2. Led and supervised the technical team, including web and mobile app developers. 3. Managed projects using tools such as ClickUp, Trello, and Microsoft Project. 4. Managed infrastructure and servers (DevOps) to ensure operational continuity. 5. Collaborated in organizational sales meetings and negotiated with institutions and organizations to provide technical solutions.					
<hr/>					
March 2016 - December 2017	Co-founder & Full Stack Developer	Haminvara			
<hr/>					
Tasks and Achievements					
1. Co-founded "Haminvara," an urban information platform connecting business owners (Supply) with the general public (Demand). 2. Led the complete software architecture design, database implementation, and full-stack web development (Back-end & Front-end). 3. Focused on data structuredness, scalable development, and delivering a simplified user experience (UX) for end-users.
